

SEWER JUNCTION CONNECTION POLICY

Responsible Department: Infrastructure Delivery
Responsible Section: Water Services
Responsible Officer: Manager Water Services

Objective

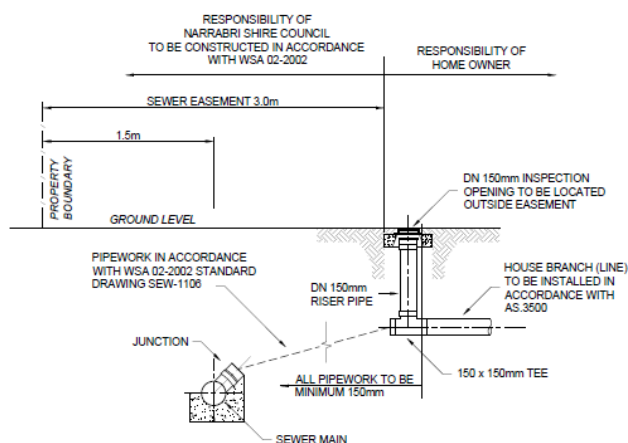

To ensure:

- Clear, concise and easy to follow advice in undertaking Sewer Connections;
- Current applications records are accessible on or via Council’s record management system.

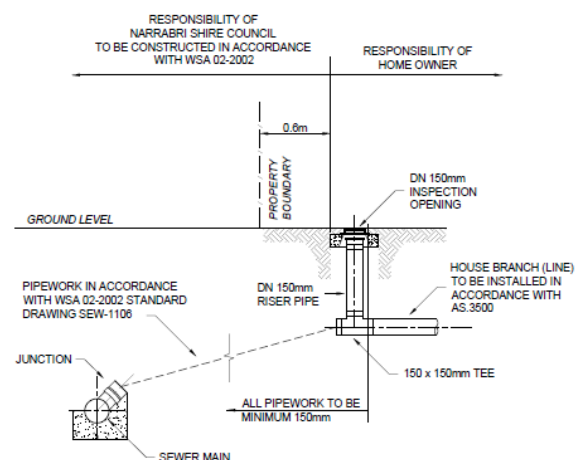

Introduction

Council’s Sewerage System transports sewerage to Council’s treatment plant. The integrity of the system allows council to manage its Public and Environmental Health responsibilities.

The sections of pipework that are Council’s responsibility are identified in the following two diagrams.

Sewer Main Located Inside the Property

Sewer Main Located Outside the Property

Policy

Connection to Council's Sewerage System will be approved and provided by Council, subject to the following conditions:

- 1.1. A Sewerage Service Connection form is completed signed and the appropriate payment is made in accordance with Council's Fees and Charges.
- 1.2. The property owner will be responsible for ensuring that:
 - No trade waste (liquid or otherwise) enters Council's Sewerage System without Council's approval via a trade waste agreement;
 - Stormwater does not enter Council's Sewerage System (ie roof or yard connections);
 - Seepage and subsoil water does not enter Council's Sewerage System;
 - The Sewerage Service connection and appropriate pipe work and fittings are adequately protected;
 - The Inspection Opening is readily accessible at all times and covered by a commercially available screw cap fitted 100mm proud of the ground level.
- 1.3. The property owner will (at their cost) engage a licensed plumber to repair or replace any pipework, that is not the responsibility of Council as outlined in the diagram above.
- 1.4. The property owner will (at their cost) engage a licensed plumber to clear all blockages of any pipework, that is not the responsibility of Council as outlined in the diagram above. All debris from any blockage is to be captured and removed from the pipe work and not simply pushed into Council's Sewerage System.
- 1.5. Council will recover from the property owner any costs that Council incurs as a result of the following:
 - The property owner damaging any pipe work owned by Council;
 - Council having to locate an Inspection Opening that is not readily accessible;
 - Council having to clear above ground obstructions located above a Sewerage Connection point on private property;
 - Council having to clear its Sewerage System as a result of debris being cleared from a property owners blocked pipeline and that debris ending up in Council's Sewerage System.
- 1.6. Should Council decide to provide a new connection point due to damage from tree roots or other causes emanating from the property, the property owner will be required to adjust their own pipework at their own cost.
